# Process Reflection

# You Completed Your First Sprint!

- We will use today to reflect on *process* approaches that worked (and didn't).
- Another time, we'll discuss *teamwork*.

# Reminder: Process

- "The software engineering process consists of the set of activities required to conceive, design, implement, test, deploy and maintain a software system. It encompasses the entire lifecycle from conception to retirement of a software product."

https://www.computer.org/resources/software-engineering-process

# Retrospective Meetings

- Have you done a retrospective meeting yet?
- According to scrum.org, discuss:
  - What went well
  - What could be improved
  - What you will commit to improving in the next sprint
    - You can add items to the backlog to address these
- Three hours for a one-month sprint

https://www.scrum.org/resources/what-is-a-sprint-retrospective

# Today

- For the first few minutes:
  - Write down key process decisions your team made.
  - Reflect on what is working well and poorly.
- Then, discuss with a small group and share decisions and ideas.
- We'll debrief together.
